

has Function

NarendraP

`./jq`

Jq Command for Bash Shell Scripting

has Function:

- The 'has' function returns true/false based on whether the input object has a given key or input array has element at given index
- Note: has function output is either true or false
- Syntax:
 - `jq 'has("key")' filename` (if input is json object)
 - `jq 'has(indexPosition)' filename` (if input is json array)

Jq is a command-line utility to parse JSON Data

Thank you
