

map Function

NarendraP

`./jq`

Jq Command for Bash Shell Scripting

map Function:

- map function is used to translate all items in an array to new array items
- Note: Input and Output both are always arrays
- Syntax:
 - jq 'map(filter)' filename
 - jq 'map(function)' filename

 - jq 'map(filter) | filter' filename
 - jq 'map(function)| filter' filename

 - jq 'map(filter) | function' filename
 - jq 'map(function) | function' filename

Jq is a command-line utility to parse JSON Data

Thank you
