

Working With JSON Arrays Using Jq Command

NarendraP

./jq

Jq Command for Bash Shell Scripting

Working With JSON Arrays Using Jq Command

- Basics of JSON Array:

- [1,2,4,6,8,9]

- {

- “technology”: “devops”,

- “tools”: [

- “Jenkins”,

- “bamboo”,

- “stackstorm”,

- “git”,

- “maven”

-]

- }

- Note: JSON Array Values are called items/Elements and these are indexed (+ve and -ve)

- Items/Elements are accessed using either +ve/-ve index

- Accessing All Array Elements Using Iterator Filter/Array Filter: jq “[]” filename

- Accessing Required Array Item: jq “[indexOfTheItem]” fileName

Jq is a command-line utility to parse JSON Data

Thank you
