Basics of Linux pipes and Redirections

NarendraP

./jq

BASH
THE BOURNE-AGAIN SHELL

Jq Command for Bash Shell Scripting

Basics of Linux Pipes and Redirections

- Pipes:
  - To Pass one command output as an input to another command
  - Cmd1 | Cmd2
- Redirection:
  - Are used to create a file or to read from a file
    - Cmd > file.txt to create a new file/re-write new content to an exiting file
    - Cmd >> file.txt   to append content to an existing file
    - Cmd < input (to provide input as a file)
    - Cmd << input (to provide input as a multiline)
    - Cmd <<< input (to provide input as a string (single or multiple lines))

    - Cmd <<< "$(command output)"

Jq is a command-line utility to parse JSON Data

Thank you
